

Andrés Coseani

Fullstack Developer · Next.js / NestJS / React / Node.js / PostgreSQL

Systems Analyst with hands-on experience in fullstack development of enterprise web applications. Full software lifecycle ownership: requirements gathering, solution architecture, frontend/backend development, database integration, deployment, and post-production support. Focused on building scalable and maintainable systems under agile methodologies.

EXPERIENCE

Fullstack Developer · Freelance Apr 2026 – Jun 2026

HostelPet · Pet Sitter Booking System

NestJS · Next.js · TypeScript · Firebase · GitHub · Jira

- Participated in the analysis phase, produced architecture diagrams and collaborated on defining system flows during the first month of the project.
- Developed the majority of the backend with NestJS, implementing modules, services and controllers under a modular architecture.
- Built REST endpoints with validations using typed DTOs and integrated Firebase Authentication for secure user management.
- Collaborated on the frontend with Next.js as part of a team, integrating APIs and managing application state.

Fullstack Developer · Freelance Apr 2026 – May 2026

AnderaBooking · Booking System

Next.js · NestJS · TypeScript · Firebase · Vercel

- Designed and built a booking system for a beauty studio from scratch, covering the full cycle: analysis, development, and deployment.
- Built a public landing page and a backoffice (admin panel) to manage working hours, services, appointments, and clients.
- Implemented appointment management with real-time availability, Meta API integration, and webhooks for automated client reminders.

Fullstack Developer · Freelance Feb 2026 – Abr 2026

Blinker · Real-time platform connecting people with verified professionals

NestJS · Next.js · TypeScript · Firebase · GitHub · Jira

- Worked as a fullstack developer in a 3-person team, coordinating through meetings and task management in Jira to integrate new features and resolve bugs on the C2C platform.
- Implemented session flows using Firebase Auth to securely handle user authentication.

- Developed and consumed REST APIs while maintaining contract stability between frontend and backend.
- Performed integrations and changes on the Firebase Firestore database, working with normalized NoSQL structures.
- Used Git/GitHub for feature branching and pull requests within the team's workflow.

Fullstack Developer • Freelance

Dic 2025 – Ene 2026

La Integradora • Financial Reconciliation System

NestJS • Next.js • MongoDB • Jira

- Provided active support and maintenance on a live financial system without impacting availability (hotfixes).
- Developed bulk data import/export logic from Excel spreadsheets (Fiserv and Tarjeta Naranja) into MongoDB.
- Identified and resolved incidents reported during real-world usage, working directly on production branches.

Systems Analyst & Fullstack Developer • Academic Project

Ago 2025 – Dic 2025

Reciclados "Don Nildo" • Web ERP System

React • Tailwind CSS • Node.js • Express.js • Supabase • PostgreSQL

- Participated in the functional analysis and requirements gathering phase to jointly define the software architecture.
- Developed the web ERP system from scratch, integrating purchase, sales, stock control, security, and reporting modules.
- Implemented the database in Supabase (PostgreSQL) with Row Level Security (RLS) and Supabase Auth per user role.
- Built the REST API with Express.js following a layered architecture (controllers and services).
